

## BÁO CÁO THỰC HÀNH LAB 4 LẬP TRÌNH HƯỚNG ĐỐI TƯỢNG

### Inheritance and Polymorphism

#### 3. Creating the Book class

```
1 package hust.soict.globalict.aims.media;
2
3 > import ...
4
5
6 public class Book {
7     private int id;
8     private String title;
9     private String category;
10    private float cost;
11    private List<String> authors = new ArrayList<>();
12
13    public Book(String title, String category, float cost) {
14        this.title = title;
15        this.category = category;
16        this.cost = cost;
17    }
18
19 >    public int getId() { return id; }
20
21
22
23 >    public void setId(int id) { this.id = id; }
24
25
26
27 >    public String getTitle() { return title; }
28
29
30
31 >    public void setTitle(String title) { this.title = title; }
32
33
34
35 >    public String getCategory() { return category; }
36
37
38
39 >    public void setCategory(String category) { this.category = category; }
40
41
42
43 >    public float getCost() { return cost; }
44
45
46
47 >    public void setCost(float cost) { this.cost = cost; }
48
49
50
51 >    public List<String> getAuthors() { return authors; }
52
53
54
55 >    public void setAuthors(List<String> authors) { this.authors = authors; }

## 4. Creating the abstract Media class

```

1 package hust.soict.globalict.aims.media;
2
3 public abstract class Media {
4     private int id;
5     private String title;
6     private String category;
7     private float cost;
8
9
10    public int getId() { return id; }
13
14    public void setId(int id) { this.id = id; }
17
18    public String getTitle() { return title; }
21
22    public void setTitle(String title) { this.title = title; }
25
26    public String getCategory() { return category; }
29
30    public void setCategory(String category) { this.category = category; }
33
34    public float getCost() { return cost; }
37
38    public void setCost(float cost) { this.cost = cost; }
41
42 }

```

```

1 package hust.soict.globalict.aims.media;
2
3 > import ...
5
6 public class Book extends Media {
7     private List<String> authors = new ArrayList<>();
8
9     public Book(String title, String category, float cost) {
10         setTitle(title);
11         setCategory(category);
12         setCost(cost);
13     }
14
15    public List<String> getAuthors() { return authors; }
18
19    public void setAuthors(List<String> authors) { this.authors = authors; }
22
23    public void addAuthor(String authorName) {
24        if (!authors.contains(authorName)) {
25            authors.add(authorName);
26        } else {
27            System.out.println("author already exist!");
28        }
29    }
30
31    public void removeAuthor(String authorName) {
32        if (authors.remove(authorName)) {
33            System.out.println("Remove author successfully!");
34        }
35    }
36 }

```

```

1 package hust.soict.globalict.aims.media;
2
3 public class DigitalVideoDisc extends Media {
4     private static int nbDigitalVideoDiscs = 0;
5

```

## 5. Creating the CompactDisc class

### 5.1. Create the Disc class extending the Media class

```

1 package hust.soict.globalict.aims.media;
2
3 public class Disc extends Media {
4     private String director;
5     private int length;
6
7     public Disc(String title) {
8         super(title);
9     }
10
11     public Disc(String title, String category, float cost) {
12         super(title, category, cost);
13     }
14
15     public Disc(String title, String category, float cost, String director) {
16         super(title, category, cost);
17         this.director = director;
18     }
19
20     public Disc(String title, String category, String director, int length, float cost) {
21         super(title, category, cost);
22         this.director = director;
23         this.length = length;
24     }
25
26     public String getDirector() {
27         return director;
28     }
29
30     public int getLength() {
31         return length;
32     }
33 }

```

```

1 package hust.soict.globalict.aims.media;
2
3 public class DigitalVideoDisc extends Disc {
4     private static int nbDigitalVideoDiscs = 0;
5
6     public DigitalVideoDisc(String title) {
7         super(title);
8         nbDigitalVideoDiscs++;
9         setId(nbDigitalVideoDiscs);
10    }
11
12    public DigitalVideoDisc(String title, String category, float cost) {
13        super(title, category, cost);
14        nbDigitalVideoDiscs++;
15        setId(nbDigitalVideoDiscs);
16    }
17
18    public DigitalVideoDisc(String title, String category, float cost, String director) {
19        super(title, category, cost, director);
20        nbDigitalVideoDiscs++;
21        setId(nbDigitalVideoDiscs);
22    }
23
24    public DigitalVideoDisc(String title, String category, String director, int length, float cost) {
25        super(title, category, director, length, cost);
26        nbDigitalVideoDiscs++;
27        setId(nbDigitalVideoDiscs);
28    }
29
30    @Override
31    public String toString() {
32        return "DVD - " + this.getTitle() + " - " + this.getCategory() +
33            (this.getDirector() != null ? " - " + this.getDirector() : "") +
34            (this.getLength() > 0 ? " - " + this.getLength() : "") +
35            ": " + this.getCost() + "$";
36    }
37 }

```

```
1 package hust.soict.globalict.aims.media;
2
3 public class CompactDisc extends Disc {
4     public CompactDisc(String title) {
5         super(title);
6     }
7
8     public CompactDisc(String title, String category, float cost) {
9         super(title, category, cost);
10    }
11
12    public CompactDisc(String title, String category, float cost, String director) {
13        super(title, category, cost, director);
14    }
15
16    public CompactDisc(String title, String category, String director, int length, float cost) {
17        super(title, category, director, length, cost);
18    }
19 }
```

5.2. Create the *Track* class which models a track on a compact disc and will store information including the title and length of the track

```
1 package hust.soict.globalict.aims.media;
2
3 public class Track {
4     private String title;
5     private int length;
6
7     public Track(String title) {
8         this.title = title;
9     }
10
11    public Track(String title, int length) {
12        this.title = title;
13        this.length = length;
14    }
15
16    public String getTitle() {
17        return title;
18    }
19
20    public int getLength() {
21        return length;
22    }
23 }
```

### 5.3. Open the CompactDisc class

```
4 import java.util.List;
5
6 public class CompactDisc extends Disc {
7     private String artist;
8     private List<Track> tracks = new ArrayList<>();
9
10    > public CompactDisc(String title) { super(title); }
13
14    > public CompactDisc(String title, String category, float cost) { super(title, category, cost); }
17
18    public CompactDisc(String title, String category, float cost, String director) {
19        super(title, category, cost, director);
20    }
21
22    public CompactDisc(String title, String category, String director, int length, float cost) {
23        super(title, category, director, length, cost);
24    }
25
26    > public String getArtist() { return artist; }
29
30    public void addTrack(Track track) {
31        if (!tracks.contains(track)) {
32            tracks.add(track);
33        } else {
34            System.out.println("Track already exist!");
35        }
36    }
37
38    public void removeTrack(Track track) {
39        if (tracks.remove(track)) {
40            System.out.println("Remove author successfully!");
41        }
42    }
43
44    @Override
45    public int getLength() {
46        int res = 0;
47        for (Track track : tracks) res += track.getLength();
48        return res;
49    }
50 }
51
```

## 6. Create the Playable interface

```

1 package hust.soict.globalict.aims.media;
2
3 public interface Playable {
4     public void play();
5 }

```

```

44 @Override
45 public int getLength() {
46     int res = 0;
47     for (Track track : tracks) res += track.getLength();
48     return res;
49 }
50
51 @Override
52 public void play() {
53     for (Track track : tracks) track.play();
54 }
55 }

```

```

5 private int length;
6
7 public Track(String title) { this.title = title; }
8
9
10 public Track(String title, int length) {
11     this.title = title;
12     this.length = length;
13 }
14
15
16 public String getTitle() { return title; }
17
18
19 public int getLength() { return length; }
20
21
22 @Override
23 public void play() {
24     System.out.println("Playing track: " + this.getTitle());
25     System.out.println("Track length: " + this.getLength());
26 }
27
28 }
29

```

```

30 @Override
31 public String toString() {
32     return "DVD - " + this.getTitle() + " - " + this.getCategory() +
33         (this.getDirector() != null ? " - " + this.getDirector() : "") +
34         (this.getLength() > 0 ? " - " + this.getLength() : "") +
35         ": " + this.getCost() + "$";
36 }
37
38 @Override
39 public void play() {
40     System.out.println("Playing DVD: " + this.getTitle());
41     System.out.println("DVD length: " + this.getLength());
42 }
43 }

```

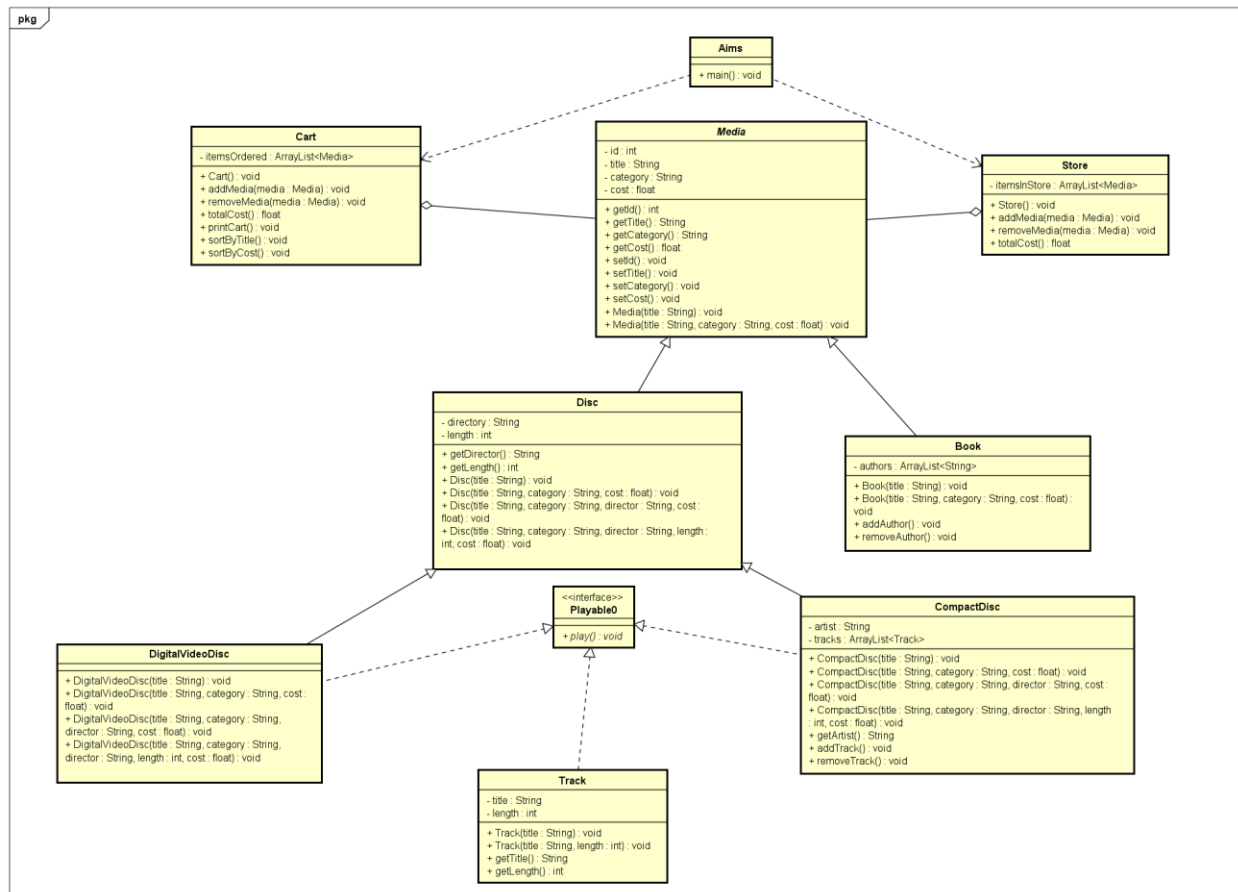

## 7. Update the Cart class to work with Media

```
1 package hust.soict.globalict.aims.cart;
2
3 > import ...
4
5
6
7
8
9
10 public class Cart {
11     public static final int MAX_NUMBERS_ORDERED = 20;
12     private ArrayList<Media> itemsOrdered = new ArrayList<Media>();
13
14     public void addMedia(Media media) {
15         if(itemsOrdered.size() == MAX_NUMBERS_ORDERED) System.out.println("The cart is almost full");
16         else {
17             itemsOrdered.add(media);
18             System.out.println("The media has been added");
19         }
20     }
21
22     public void removeMedia(Media media) {
23         if(itemsOrdered.remove(media)) {
24             System.out.println("The media has been removed");
25         } else System.out.println("Not have this media");
26     }
27
28     public float totalCost() {
29         float sum = 0;
30         for(Media media : itemsOrdered) {
31             sum += media.getCost();
32         }
33         return sum;
34     }
35 }
```

## 8. Update the Store class to work with Media

```
1 package hust.soict.globalict.aims.store;
2
3 > import ...
4
5
6
7
8
9
10 public class Store {
11     public static final int MAX_NUMBERS_VIDEOS = 20;
12     private ArrayList<Media> itemsInStore = new ArrayList<Media>();
13
14     public void addMedia(Media media) {
15         if(itemsInStore.size() == MAX_NUMBERS_VIDEOS) System.out.println("The store is almost full");
16         else {
17             itemsInStore.add(media);
18             System.out.println("The store has been added");
19         }
20     }
21
22     public void removeMedia(Media media) {
23         if(itemsInStore.remove(media)) {
24             System.out.println("The media has been removed");
25         } else System.out.println("Not have this media");
26     }
27
28     public float totalCost() {
29         float sum = 0;
30         for(Media media : itemsInStore) {
31             sum += media.getCost();
32         }
33         return sum;
34     }
35 }
```

## 9. Constructors of whole classes and parent classes

## 10. Unique item in a list

```
Media.java x DigitalVideoDisc.java Disc.java Playable.java Aims.java Cart.java Book.java Track.java x
22 > public int getLength() { return length; }
25
26 @Override
27 public void play() {
28     System.out.println("Playing track: " + this.getTitle());
29     System.out.println("Track length: " + this.getLength());
30 }
31
32 @Override
33 public boolean equals(Object obj) {
34     if (obj instanceof Track) {
35         return Objects.equals(this.title, ((Track) obj).title)
36             && this.length == ((Track) obj).length;
37     }
38     return false;
39 }
40 }
41

Media.java x DigitalVideoDisc.java Disc.java Playable.java Aims.java Cart.java Book.java Track.java
41
42 > public String getTitle() { return title; }
45
46 > public void setTitle(String title) { this.title = title; }
49
50 > public String getCategory() { return category; }
53
54 > public void setCategory(String category) { this.category = category; }
57
58 > public float getCost() { return cost; }
61
62 > public void setCost(float cost) { this.cost = cost; }
65
66 @Override
67 public boolean equals(Object obj) {
68     if (obj instanceof Media) {
69         return Objects.equals(this.title, ((Media) obj).title);
70     }
71     return false;
72 }
73
```

## 11. Polymorphism with toString() method

```

74 public static void main(String[] args) {
75     DigitalVideoDisc dvd = new DigitalVideoDisc("The Lion King", "Animation", "Roger Allers", 87, 19.95f);
76     CompactDisc cd = new CompactDisc("Hello", "Ballad", 5f);
77     Book book = new Book("Jungle", "Alan Kay", 12f);
78
79     List<Media> media = new ArrayList<>();
80     media.add(dvd);
81     media.add(cd);
82     media.add(book);
83
84     for(Media item : media) {
85         System.out.println(item.toString());
86     }
87 }
88 }

```

Run Aims x Media x

```

"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\JetBrains\IntelliJ IDEA 2023.1\lib\idea_rt.jar=53153:E:\JetBrains\IntelliJ IDEA 2023.1\
DVD - The Lion King - Animation - Roger Allers - 87: 19.95$
CD - Hello - Ballad: 5.0$
Book - Jungle - Alan Kay: 12.0$
Process finished with exit code 0

```

In the provided example, even though the **toString()** method is called from an instance of the **Media** class, the compiler is aware of the specific subclass and can determine the appropriate **toString()** method to invoke.

Within the **Main** class, three objects are created: **dvd**, of type **Media**, but referring to a **DigitalVideoDisc** object; **cd**, of type **Media**, but referring to a **CompactDisc** object; and **book**, of type **Media**, but referring to a **Book** object. When the **toString()** method is called on these objects, the overridden method in each subclass is executed, and the corresponding string representation is returned. This showcases the ability of polymorphism, allowing objects of different subclasses to be treated as instances of the superclass, thereby facilitating a more flexible and extensible code structure.

## 12. Sort media in the cart

```

Media.java  MediaComparatorByCostTitle.java  DigitalVideoDisc.java  Disc.java  Playable.java  Aims.java  Cart.java  Bo
1 package hust.soict.globalict.aims.media;
2
3 import java.util.Comparator;
4
5 public class MediaComparatorByCostTitle implements Comparator<Media> {
6
7     @Override
8     public int compare(Media m1, Media m2) {
9         int result = Float.compare(m1.getCost(), m2.getCost());
10        if (result != 0) {
11            return result;
12        }
13        return m1.getTitle().compareTo(m2.getTitle());
14    }
15 }

```

```

Media.java  MediaComparatorByTitleCost.java  DigitalVideoDisc.java  Disc.java  Playable.java  Aims.java  Cart.java  Bo
1 package hust.soict.globalict.aims.media;
2
3 import java.util.Comparator;
4
5 public class MediaComparatorByTitleCost implements Comparator<Media> {
6
7     @Override
8     public int compare(Media m1, Media m2) {
9         int result = m1.getTitle().compareTo(m2.getTitle());
10        if (result != 0) {
11            return result;
12        }
13        return Float.compare(m1.getCost(), m2.getCost());
14    }
15 }

```

```

Media.java  MediaComparatorByTitleCost.java  DigitalVideoDisc.java  Disc.java  Playable.java  Aims.java  Cart.java  Bo
1 package hust.soict.globalict.aims.media;
2
3 import java.util.ArrayList;
4 import java.util.Comparator;
5 import java.util.List;
6 import java.util.Objects;
7
8 public abstract class Media {
9     public static final Comparator<Media> COMPARE_BY_TITLE_COST =
10        new MediaComparatorByTitleCost();
11     public static final Comparator<Media> COMPARE_BY_COST_TITLE =
12        new MediaComparatorByCostTitle();
13     private static int nbMedia = 0;
14 }

```

### 13. Create a complete console application in the Aims class

```
"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\JetBrains\IntelliJ IDEA 2023.1\lib\idea_rt.jar=59965:E:\JetBrains\IntelliJ IDEA 2023.1\bin" -Dfile.encoding=UTF-8
