

## BÁO CÁO THỰC HÀNH LAB 1 LẬP TRÌNH HƯỚNG ĐỐI TƯỢNG

### The Very First Java Programs

#### 2.2.1 Write, compile the first Java application:

```
1  // Example 1: HelloWorld.java
2  // Text-printing program
   no usages
3  public class HelloWorld {
4
   no usages
5  public static void main(String[] args) {
6      System.out.println("Xin chao \n cac ban!");
7      System.out.println("Hello \t World!");
8  } //end of the method
9  }
```

#### Kết quả

```
1  // Example 1: HelloWorld.java
2  // Text-printing program
   no usages
3  public class HelloWorld {
4
   no usages
5  public static void main(String[] args) {
6      System.out.println("Xin chao \n cac ban!");
7      System.out.println("Hello \t World!");
8  } //end of the method
9  }
```

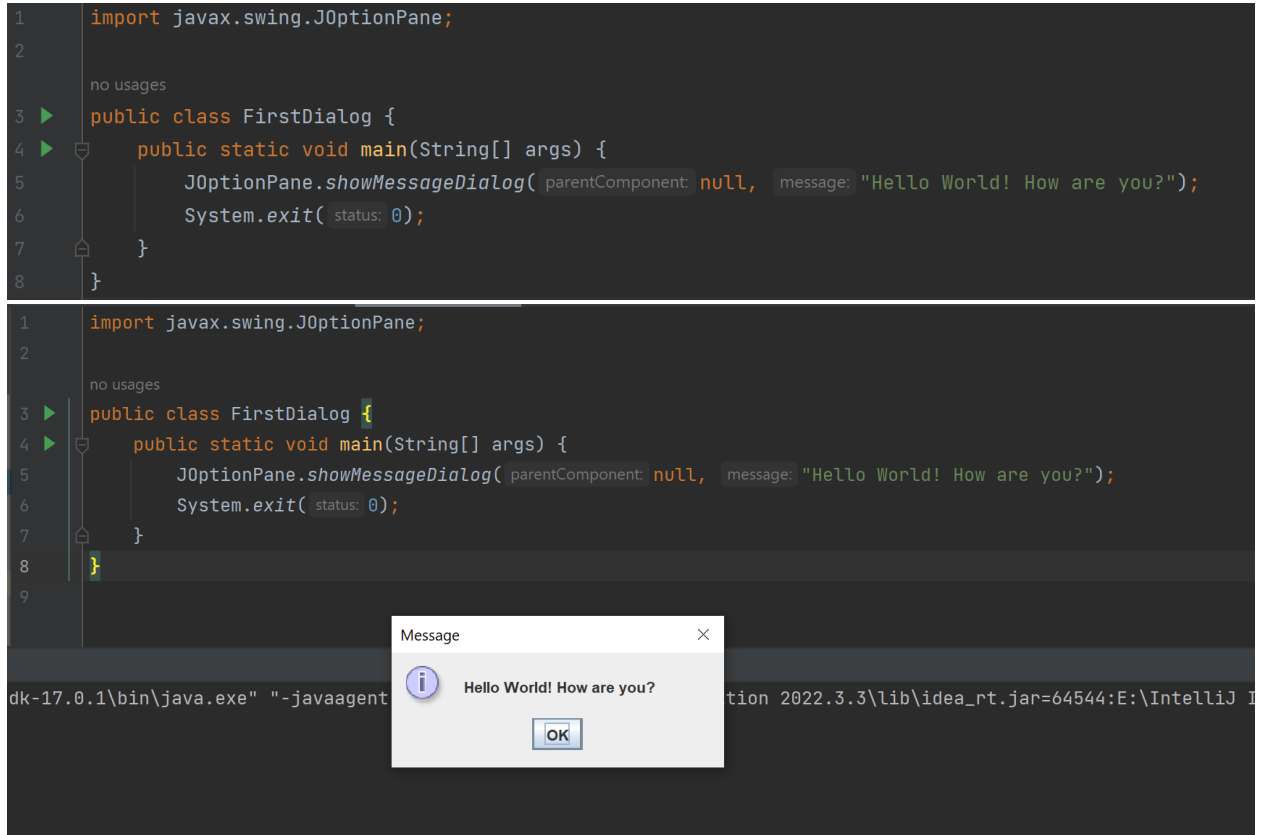

Run: HelloWorld

```
"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edition 2022.3.3\
Xin chao
  cac ban!
Hello   World!

Process finished with exit code 0
```

### 2.2.2 Write, compile the first dialog Java program

```
1  import javax.swing.JOptionPane;
2
3  no usages
4  ▶ public class FirstDialog {
5  ▶     public static void main(String[] args) {
6      JOptionPane.showMessageDialog( parentComponent: null, message: "Hello World! How are you?");
7      System.exit( status: 0);
8  }
9  }
```

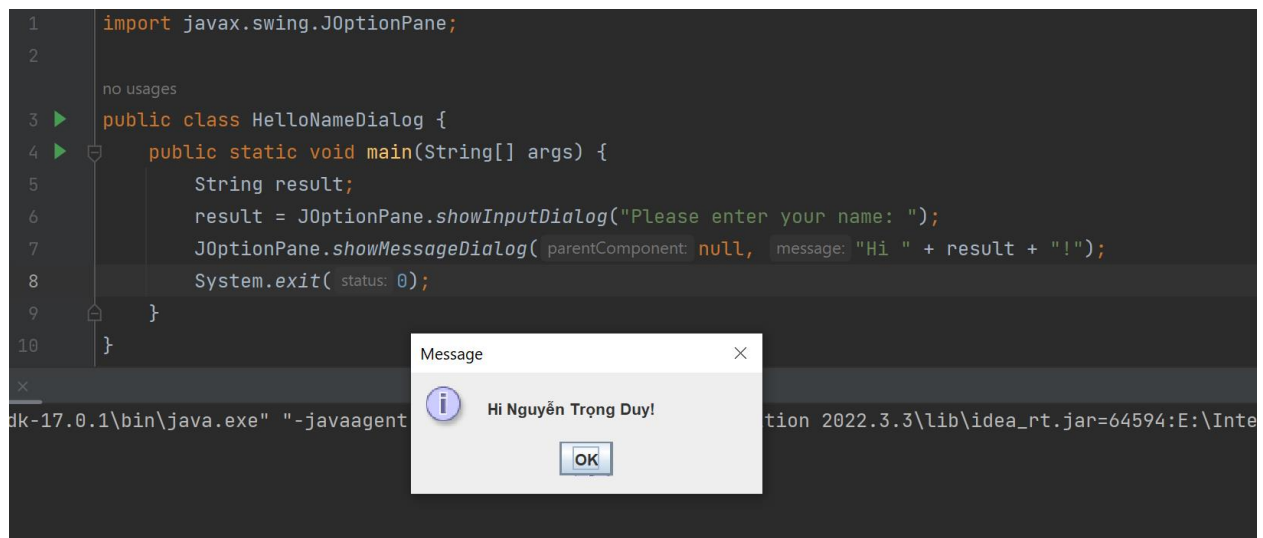

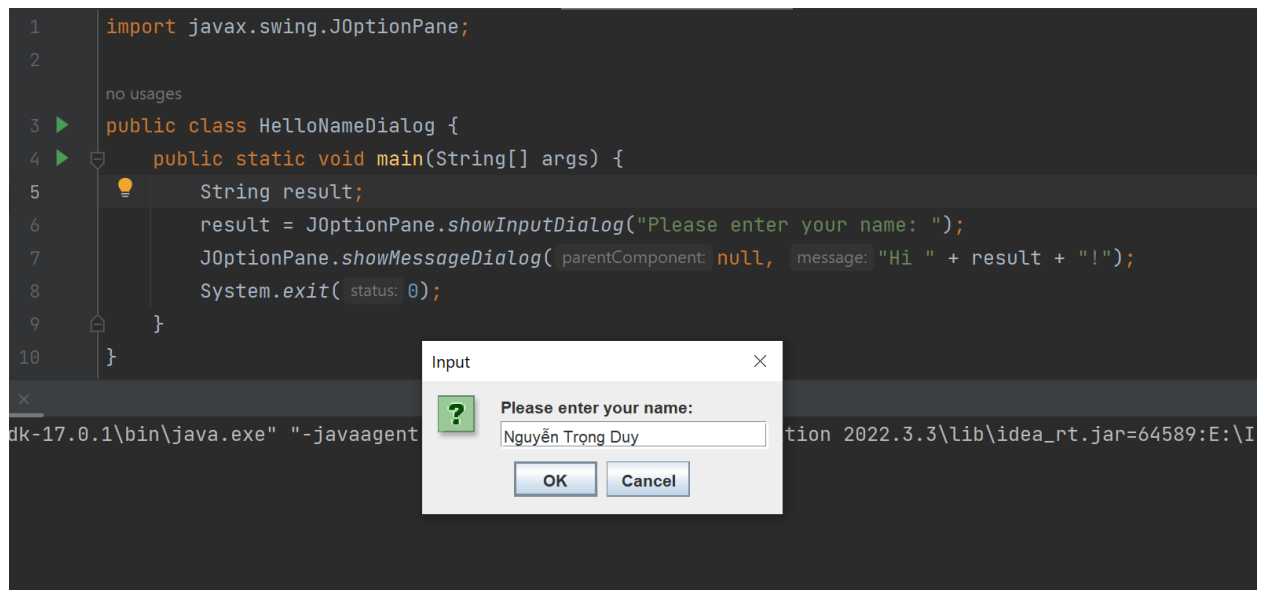

The screenshot shows a Java IDE with a code editor and a console. The code editor displays the following code:

```
1  import javax.swing.JOptionPane;
2
3  no usages
4  ▶ public class FirstDialog {
5  ▶     public static void main(String[] args) {
6      JOptionPane.showMessageDialog( parentComponent: null, message: "Hello World! How are you?");
7      System.exit( status: 0);
8  }
9  }
```

Below the code editor, a console window shows the command: `jdk-17.0.1\bin\java.exe" "-javaagent`. Overlaid on the console is a "Message" dialog box with the text "Hello World! How are you?" and an "OK" button.

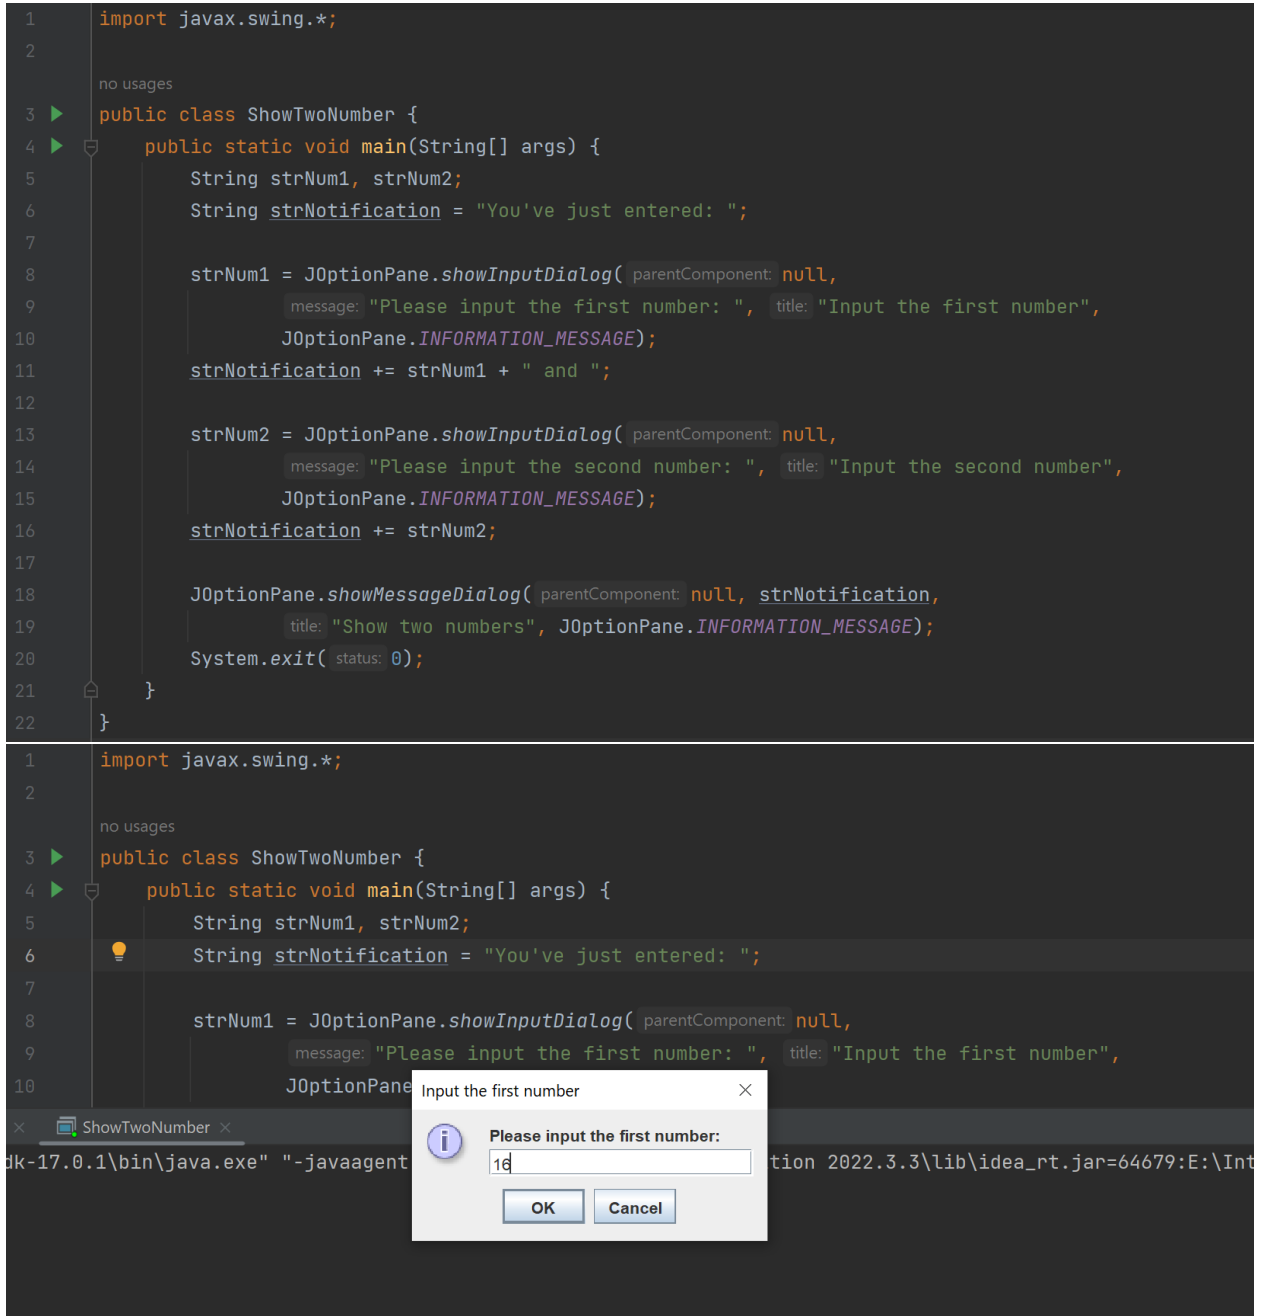

### 2.2.3 Write, compile the first input dialog Java application

```
1  import javax.swing.JOptionPane;
2
3  no usages
4  ▶ public class HelloNameDialog {
5  ▶     public static void main(String[] args) {
6      String result;
7      result = JOptionPane.showInputDialog("Please enter your name: ");
8      JOptionPane.showMessageDialog( parentComponent: null, message: "Hi " + result + "!");
9      System.exit( status: 0);
10 }
```

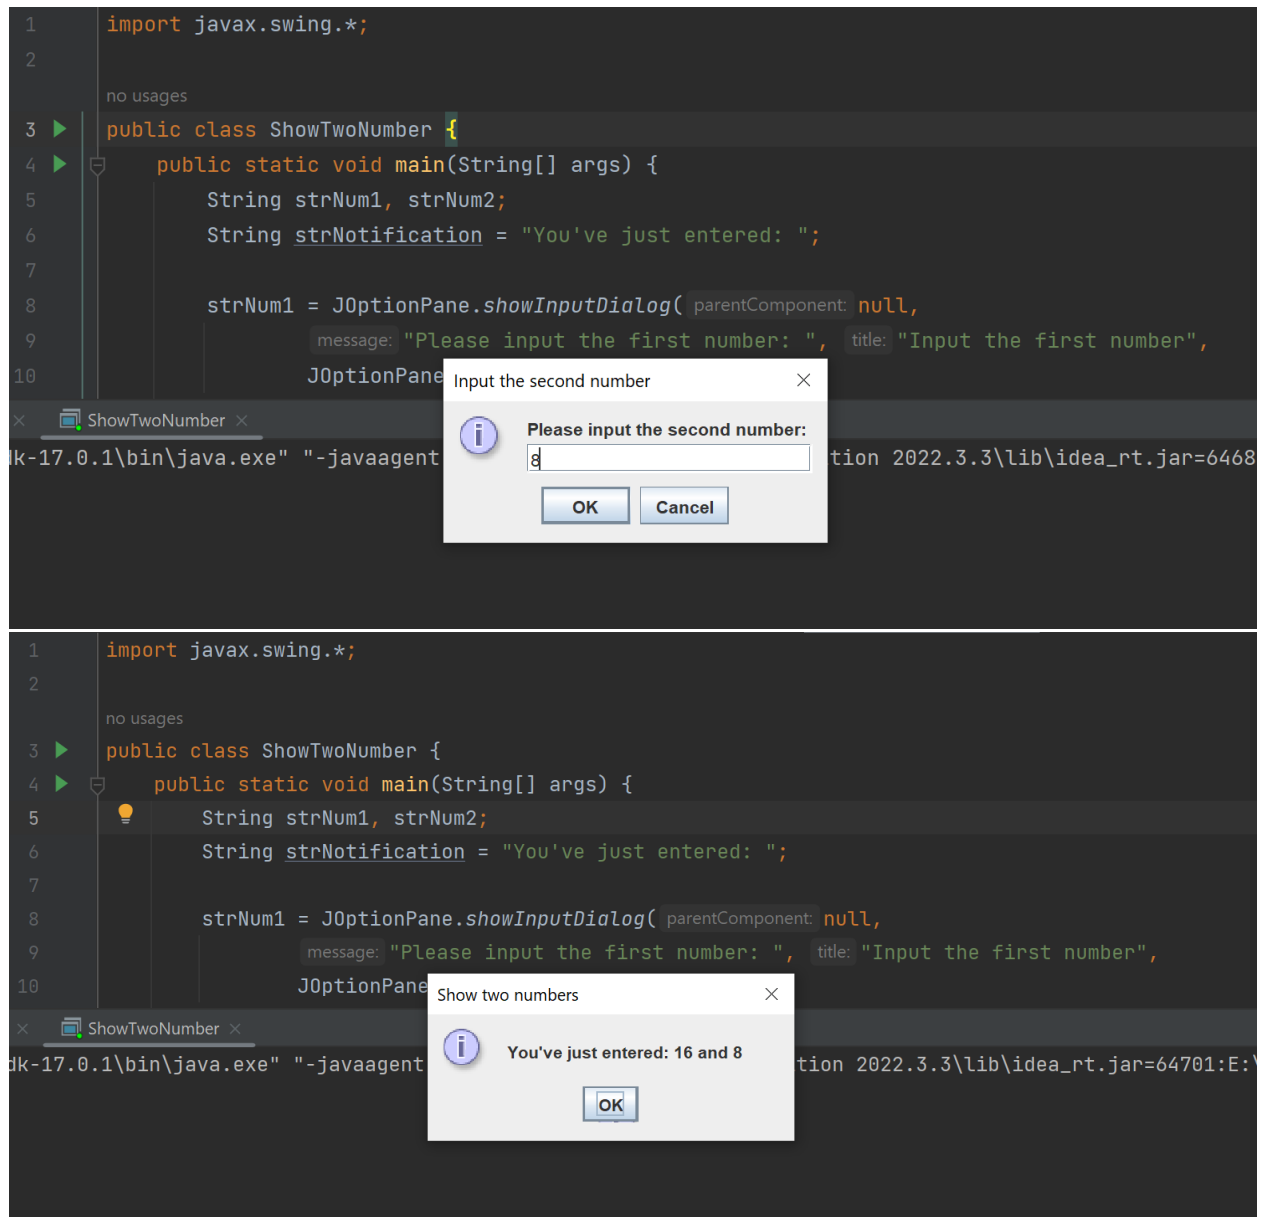

## 2.2.4 Write, compile, and run the following example:

```
1  import javax.swing.*;
2
3  no usages
4  public class ShowTwoNumber {
5      public static void main(String[] args) {
6          String strNum1, strNum2;
7          String strNotification = "You've just entered: ";
8
9          strNum1 = JOptionPane.showInputDialog( parentComponent: null,
10             message: "Please input the first number: ", title: "Input the first number",
11             JOptionPane.INFORMATION_MESSAGE);
12          strNotification += strNum1 + " and ";
13
14          strNum2 = JOptionPane.showInputDialog( parentComponent: null,
15             message: "Please input the second number: ", title: "Input the second number",
16             JOptionPane.INFORMATION_MESSAGE);
17          strNotification += strNum2;
18
19          JOptionPane.showMessageDialog( parentComponent: null, strNotification,
20             title: "Show two numbers", JOptionPane.INFORMATION_MESSAGE);
21          System.exit( status: 0);
22      }
23  }
```

The screenshot shows the IDE interface with the code being executed. A dialog box titled "Input the first number" is displayed, prompting the user to "Please input the first number:". The input field contains the number "10". The dialog box has "OK" and "Cancel" buttons.

2.2.5 Write a program to calculate sum, difference, product, and quotient of 2 double numbers which are entered by users.

```

1 //a program to calculate sum, difference, product, and quotient of 2 double numbers which are entered by users.
2 import java.util.Scanner;
3
4 public class Exercise225 {
5     public static void main(String[] args) {
6         Scanner scanner = new Scanner(System.in);
7         System.out.print("Enter the first number: ");
8         double number_1 = Double.parseDouble(scanner.nextLine());
9         System.out.print("Enter the second number: ");
10        double number_2 = Double.parseDouble(scanner.nextLine());
11        System.out.println("The sum of two number is: " + (number_1 + number_2));
12        System.out.println("The difference of two number is: " + (number_1 - number_2));
13        System.out.println("The product of two number is: " + (number_1 * number_2));
14        System.out.println("The quotient of two number is: " + (number_1 / number_2));
15    }
16 }

```

```

1 //a program to calculate sum, difference, product, and quotient of 2 double numbers which are entered by users.
2 import java.util.Scanner;
3
4 public class Exercise225 {
5     public static void main(String[] args) {
6         Scanner scanner = new Scanner(System.in);
7         System.out.print("Enter the first number: ");
8         double number_1 = Double.parseDouble(scanner.nextLine());
9         System.out.print("Enter the second number: ");
10        double number_2 = Double.parseDouble(scanner.nextLine());
11        System.out.println("The sum of two number is: " + (number_1 + number_2));
12        System.out.println("The difference of two number is: " + (number_1 - number_2));
13        System.out.println("The product of two number is: " + (number_1 * number_2));
14        System.out.println("The quotient of two number is: " + (number_1 / number_2));
15    }
16 }

```

Run: FirstDialog x HelloNameDialog x ShowTwoNumber x Exercise225 x

```

"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edit
Enter the first number: 16
Enter the second number: 8
The sum of two number is: 24.0
The difference of two number is: 8.0
The product of two number is: 128.0
The quotient of two number is: 2.0

Process finished with exit code 0

```

2.2.6 Write a program to solve:

**The first-degree equation**

```

1  import java.util.Scanner;
2
3  public class Exercise226 {
4      static void first_degree_equation() {
5          // The first-degree equation (linear equation) with one variable
6          Scanner scanner = new Scanner(System.in);
7          float a, b;
8          do {
9              System.out.print("Enter a: ");
10             a = scanner.nextFloat();
11             if (a == 0) System.out.println("a must not equal to 0");
12         } while(a == 0);
13
14         System.out.print("Enter b: ");
15         b = scanner.nextFloat();
16         System.out.println("x = " + (b / a));
17     }
18
19     if (delta < 0) System.out.println("No solutions");
20     else if (delta == 0) System.out.println("x = " + (-b / (2*a)));
21     else {
22         System.out.println("x1 = " + ((-b + Math.sqrt(delta)) / (2*a)));
23         System.out.println("x2 = " + ((-b - Math.sqrt(delta)) / (2*a)));
24     }
25 }
26
27 public static void main(String[] args) {
28     first_degree_equation();
29 }
30 }

```

Run: FirstDialog x HelloNameDialog x ShowTwoNumber x Exercise226 x

```

"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edition 2022.3.3\
Enter a: 0
a must not equal to 0
Enter a: 3
Enter b: 8
x = 2.6666667
Process finished with exit code 0

```

### The system of first-degree equations (linear system) with two variables

```

48
49 static void system_of_first_degree_equations() {
50     Scanner scanner = new Scanner(System.in);
51     double a11 , a12 , b1 , a21 , a22 , b2;
52     System.out.print("Input a11 , a12 , b1 : ");
53     a11 = scanner.nextDouble();
54     a12 = scanner.nextDouble();
55     b1 = scanner.nextDouble();
56     System.out.print("Input a21 , a22 , b2 : ");
57     a21 = scanner.nextDouble();
58     a22 = scanner.nextDouble();
59     b2 = scanner.nextDouble();
60     double Det = (a11 * a22 - a12 * a21);
61     double Dx = (b1 * a22 - b2 * a12);
62     double Dy = (b2 * a11 - b1 * a21);
63     if (Det == 0) {
64         if ( a11 == 0 && a12 == 0 && b1 != 0) System.out.println("No solution !");
65         else if ( a21 == 0 && a22 == 0 && b2 != 0) System.out.println("No solution !");
66         else if(Dx == 0 && Dy == 0) System.out.println("Infinite solution");
67         else System.out.println("No solution !");
68     }
69     else {
70         double x = Dx / Det;
71         double y = Dy / Det;
72         System.out.println("Solution is: x = " + x + " y = " + y);
73     }
74 }

```

```

45     }
46 }
47
48
49 static void system_of_first_degree_equations() {
50     Scanner scanner = new Scanner(System.in);
51     double a11 , a12 , b1 , a21 , a22 , b2;
52     System.out.print("Input a11 , a12 , b1 : ");
53     a11 = scanner.nextDouble();
54     a12 = scanner.nextDouble();
55     b1 = scanner.nextDouble();
56     System.out.print("Input a21 , a22 , b2 : ");
57     a21 = scanner.nextDouble();
58     a22 = scanner.nextDouble();
59     b2 = scanner.nextDouble();
60     double Det = (a11 * a22 - a12 * a21);
61     double Dx = (b1 * a22 - b2 * a12);

```

Run: Exercise226 x

```

"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edition 2022.3.3\lib\idea_rt.jar"
Input a11 , a12 , b1 : 1 2 4
Input a21 , a22 , b2 : 3 4 6
Solution is: x = -2.0 y = 3.0
Process finished with exit code 0

```

## The second-degree equation

```

19 static void second_degree_equation() {
20     Scanner scanner = new Scanner(System.in);
21     float a, b, c;
22     System.out.print("Enter a: ");
23     a = scanner.nextFloat();
24     if (a == 0) {
25         do {
26             System.out.print("Enter b: ");
27             b = scanner.nextFloat();
28             if (b == 0) System.out.println("b must not equal to 0");
29         } while(b == 0);
30
31         System.out.print("Enter c: ");
32         c = scanner.nextFloat();
33         System.out.println("x = " + (c / b));
34     } else {
35         System.out.print("Enter b: ");
36         b = scanner.nextFloat();
37         System.out.print("Enter c: ");
38         c = scanner.nextFloat();
39         float delta = (float) Math.pow(b, 2) - 4*a*c;
40         if (delta < 0) System.out.println("No solutions");
41         else if (delta == 0) System.out.println("x = " + (-b / (2*a)));
42         else {
43             System.out.println("x1 = " + ((-b + Math.sqrt(delta)) / (2*a)));
44             System.out.println("x2 = " + ((-b - Math.sqrt(delta)) / (2*a)));
45         }
46     }
47 }

48 public static void main(String[] args) {
49     second_degree_equation();
50 }
51
Run: FirstDialog x HelloNameDialog x ShowTwoNumber x Exercise226 x

Enter b: -6  
Enter c: 9  
x = 3.0  
Process finished with exit code 0

## 6.1 Write, compile and run the ChoosingOption program:

```

1  import javax.swing.JOptionPane;
2
3  no usages
4  ▶ public class ChoosingOption {
5  ▶     public static void main(String[] args) {
6      int option = JOptionPane.showConfirmDialog( parentComponent: null,
7      message: "Do you want to change to the first class ticket?");
8      JOptionPane.showMessageDialog( parentComponent: null,
9      message: "You've chosen: " + (option==JOptionPane.YES_OPTION?"YES":"NO"));
10     System.exit( status: 0);
11 }
12 }

```

dk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edition 2022.3.3\lib\idea\_rt.jar=64852:E:

## Questions:

- When users choose “Cancel”, the output is another dialog show “You’ve chosen: NO”.
- To customize the options to users, e.g. only two options: “Yes” and “No”, we can change code to this:

```

1  import javax.swing.JOptionPane;
2
3  public class ChoosingOption {
4  ▶     public static void main(String[] args) {
5      int option = JOptionPane.showConfirmDialog( parentComponent: null,
6      message: "Do you want to change to the first class ticket?", title: null, JOptionPane.YES_NO_OPTION);
7      JOptionPane.showMessageDialog( parentComponent: null,
8      message: "You've chosen: " + (option==JOptionPane.YES_OPTION?"YES":"NO"));
9      System.exit( status: 0);
10     }
11 }

```

## 6.2 Write a program for input/output from keyboard.

```
1 import java.util.Locale;
2 import java.util.Scanner;
3
4 no usages
5 public class InputFromKeyboard {
6     public static void main(String[] args) {
7         Scanner keyboard = new Scanner(System.in).useLocale(Locale.US);
8
9         System.out.println("What's your name? ");
10        String strName = keyboard.nextLine();
11        System.out.println("How old are you? ");
12        int iAge = keyboard.nextInt();
13        System.out.println("How tall are you (m)? ");
14        double dHeight = keyboard.nextDouble();
15
16        System.out.println("Mrs/Ms. " + strName + ", " + iAge + " years old. " + "Your height is " + dHeight + ".");
17    }
18 }
```

Run: FirstDialog x HelloNameDialog x ShowTwoNumber x InputFromKeyboard x

"C:\Program Files\Java\jdk-17.0.1\bin\java.exe" "-javaagent:E:\IntelliJ IDEA Community Edition 2022.3.3\lib\idea\_rt.jar=12345:C:\Program Files\Java\jdk-17.0.1\bin" -Dfile.encoding=UTF-8

What's your name?  
Nguyễn Trọng Duy  
How old are you?  
19  
How tall are you (m)?  
1.72  
Mrs/Ms. Nguyễn Trọng Duy, 19 years old. Your height is 1.72.  
Process finished with exit code 0

6.3 Write a program to display a triangle with a height of n stars (\*), n is entered by users.

```

1  import java.util.Scanner;
2
3  // program to display a triangle with a height of n stars (*), n is entered by users.
   no usages
4  ▶ public class Exercise_63 {
5  ▶     public static void main(String[] args) {
6         Scanner scanner = new Scanner(System.in);
7         System.out.print("Enter n: ");
8         int n = scanner.nextInt();
9         for(int i = n - 1; i >= 0; i--) {
10            for(int j = 0; j <= i; j++) {
11                System.out.print(" ");
12            }
13            for(int k = 1; k <= 1 + 2*(n - i - 1); k++) {
14                System.out.print("*");
15            }

Process finished with exit code 0

## 6.4 Write a program to display the number of days of a month.

```

1  .../
3  import java.util.Scanner;
   no usages
4  public class Exercise_64 {
5  public static void main(String[] args) {
6      Scanner scanner = new Scanner(System.in);
7      String month;
8      int year;
9      boolean validMonth;
10     do {
11         System.out.print("Enter month: ");
12         month = scanner.nextLine();
13         System.out.print("Enter year: ");
14         year = scanner.nextInt();
15         scanner.nextLine();
16         validMonth = true;
17         switch (month) {
18             case "1", "Jan.", "Jan", "January", "3", "Mar", "Mar.", "March",
19                 "5", "May", "7", "July", "Jul", "8", "August", "Aug.", "Aug",
20                 "10", "October", "Oct.", "Oct", "12", "December", "Dec", "Dec.":
21                 System.out.println("31 days");
22                 break;
23             case "2", "Feb", "Feb.", "February":
24                 if(!(year>0)) {
25                     System.out.println("Not a valid year, enter again!");
26                     break;
27                 }
28                 System.out.println("31 days");
29                 break;
30             case "2", "Feb", "Feb.", "February":
31                 if(!(year>0)) {
32                     System.out.println("Not a valid year, enter again!");
33                     break;
34                 }
35                 if((year % 4 == 0) || (year % 400 == 0)) System.out.println("29 days");
36                 else System.out.println("28 days");
37                 break;
38             case "4", "Apr", "Apr.", "April", "6", "Jun", "June",
39                 "9", "September", "Sep.", "Sep", "11", "November", "Nov", "Nov.":
40                 System.out.println("30 days");
41                 break;
42             default:
43                 System.out.println("Not a valid month, enter again!");
44                 validMonth = false;
45         }
46     } while (!validMonth || !(year>0));
47 }

```

The image displays a code editor with Java code for a date validation program. The code uses a switch statement to check the month and a while loop to ensure the year is positive. The output window shows the program's execution with sample inputs and the resulting number of days.

```
30         break;
31     case "4", "Apr", "Apr.", "April", "6", "Jun", "June",
32         "9", "September", "Sep.", "Sep", "11", "November", "Nov", "Nov.":
33         System.out.println("30 days");
34         break;
35     default:
36         System.out.println("Not a valid month, enter again!");
37         validMonth = false;
38     }
39 } while (!validMonth || !(year>0));
40
```
